In-class Warm Up

COSC 101C Intro to Computing I

Prof. Forrest Davis

Name:

Discuss and complete the following questions with the person nearest you. You **may** be asked to share your thoughts with the class.

1. What is your favorite conspiracy theory?

2. Write a function called `truth` which has two parameters: a question in the form of a string and a string that is the intended response. The function should ask the user for a yes/no response to the question and respond with `Correct` or `Incorrect` depending on their answer. That is, you should check their response against the response parameter. For example, `truth("Are whales mammals? ", "yes")` would output (with yes the user input):

```
Are whales mammals? yes
Correct
```

(or with no the user input):

```
Are whales mammals? no
Incorrect
```
